DETAILED ACTION

Drawings

1. **Figures 1-4 should be designated by a legend such as --Prior Art--** because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, **the bridge interval in the discharge cell corresponding to the B fluorescent layer is larger than that in the discharge cell corresponding to the R fluorescent layer must be shown or the feature(s) canceled from the claim 5.** No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

3. **The title of the invention is not descriptive.** A new title is required that is clearly indicative of the invention to which the claims are directed.

4. ***Page 4, line 14, "fluorescent layer 23" should be changed to -- fluorescent layer 24--***

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

5. Claim 6 is objected to because of the following informalities: the recitation “one of claims 1” is not clear. Appropriate correction is required.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. Claims 1, 2 and 5-8 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The recitation “bridge interval” found in claims 1, 5 and 8 is not clearly defined in specification in such a way that would help a reader to imagine it refers to the length or the wide or the volume of the bridge.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 3 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by the admitted prior art cited by the applicant.

The admitted prior art shown in figures 1- 4 clearly discloses the claimed invention in that a pair of barriers 21 corresponding to green of the red, green and blue fluorescent layers are in the form of a stripe and pairs of the barriers corresponding to the other two fluorescent layers

Art Unit: 2821

include bridges extending in a longitudinal direction of the sustaining electrodes as a discharge cell unit (Fig. 4); wherein the two fluorescent layers are red and blue fluorescent layers.

Citation of pertinent prior art

10. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Yoshida et al. (US Pat. 6,489,722) discloses plasma display panel.

Sano et al. (US Pat. 6,249,264) discloses surface discharge type plasma display panel with intersecting barrier ribs.

Choi (US Pat. 6,160,348) discloses DC plasma display panel and methods for making same.

Asano et al. (US Pat. 6,008,582) discloses plasma display device with auxiliary partition walls, corrugated, tiered and pigmented walls.
